

ASSIGNMENT – 4

DOCKER AND KUBERNETES

Student Name	Jeevarasan N
Student Roll Number	714019205020
Maximum Marks	2 marks

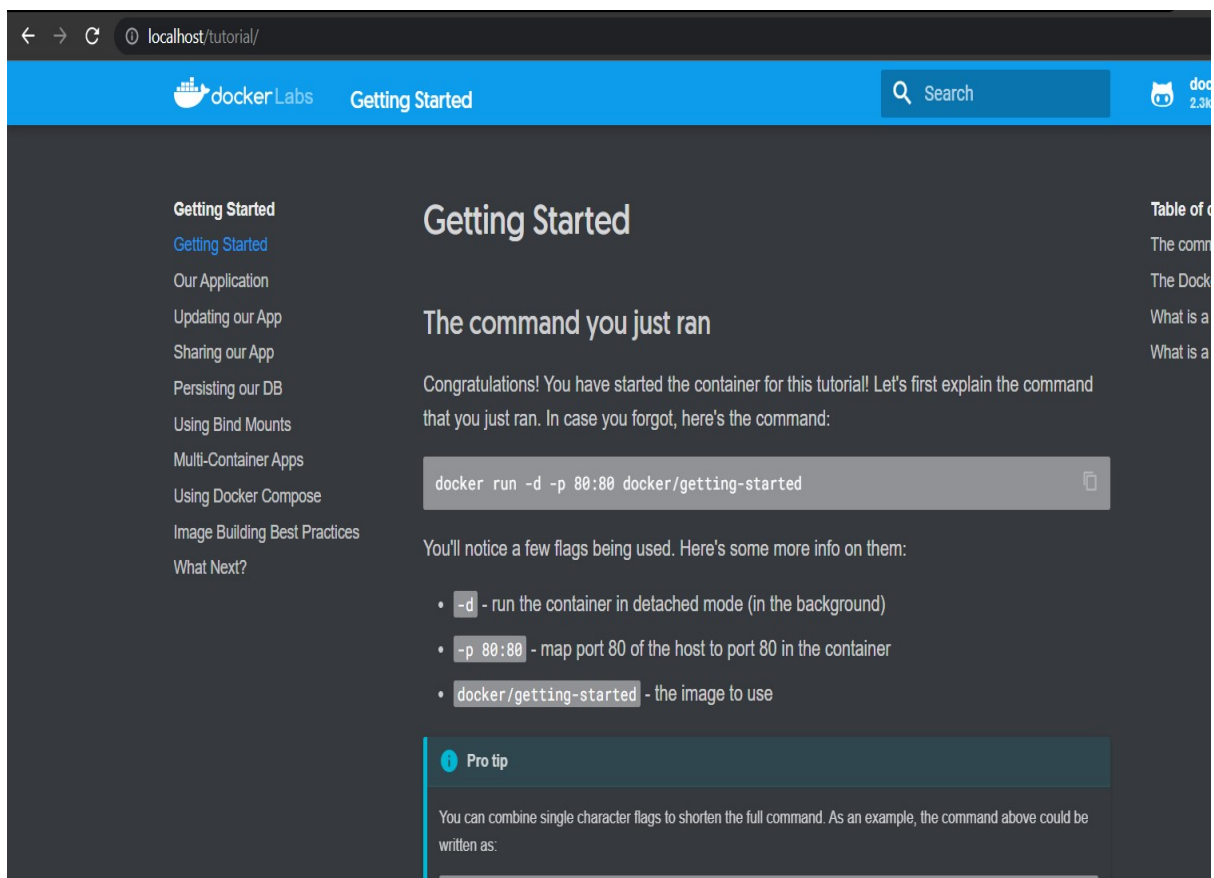

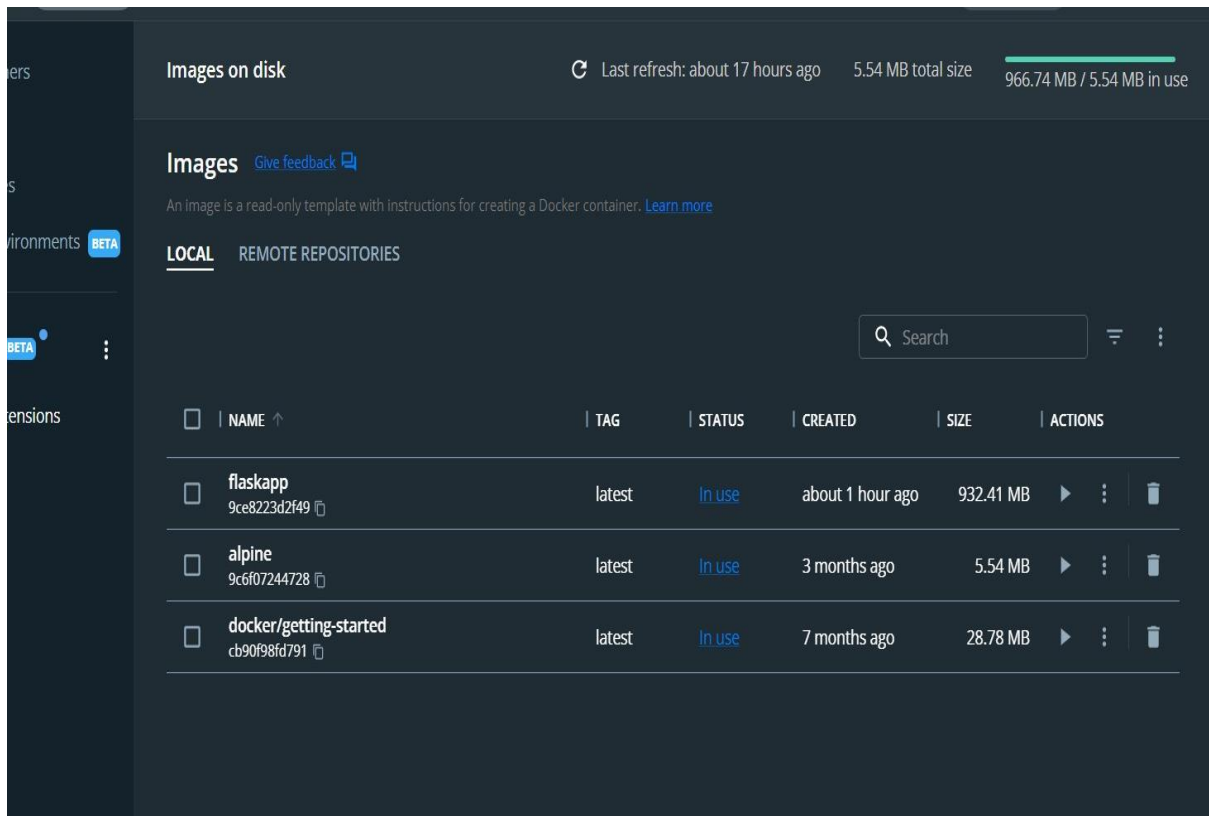

Question-1: pull an image from docker hub and run it in docker playground.

1) pull an image form docker hub

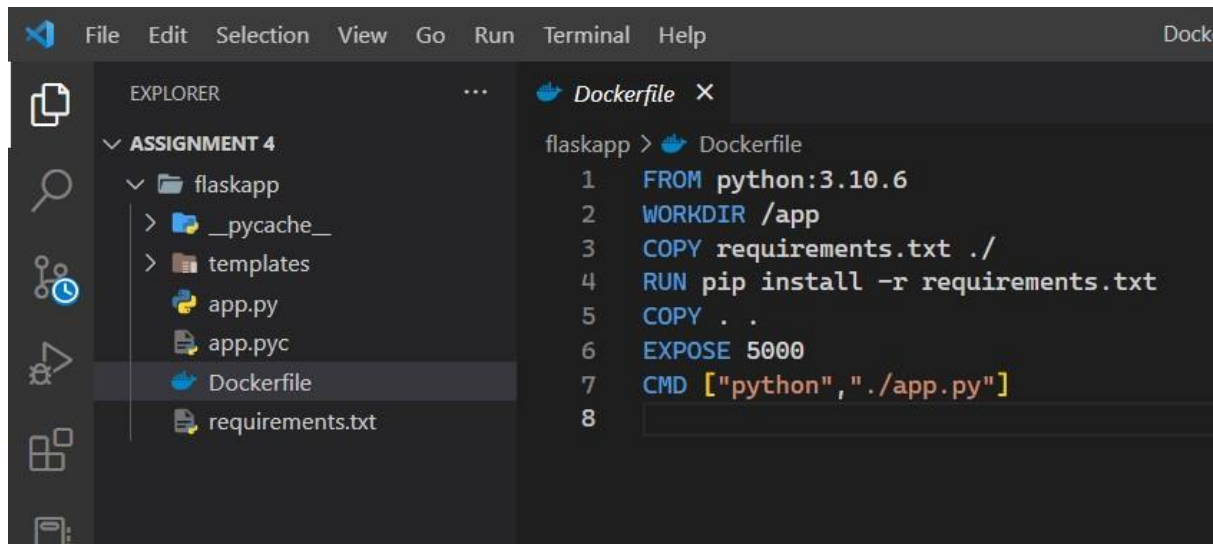

```
PowerShell
Loading personal and system profiles took 541ms.
→ assignment 4 git:(main) docker pull docker/getting-started
Using default tag: latest
latest: Pulling from docker/getting-started
df9b9388f04a: Pull complete
5867cba5fcbd: Pull complete
4b639e65cb3b: Pull complete
061ed9e2b976: Pull complete
bc19f3e8eeb1: Pull complete
4071be97c256: Pull complete
79b586f1a54b: Pull complete
0c9732f525d6: Pull complete
Digest: sha256:b558be874169471bd4e65bd6eac8c303b271a7ee8553ba47481b73b2bf597aae
Status: Downloaded newer image for docker/getting-started:latest
docker.io/docker/getting-started:latest
→ assignment 4 git:(main) |
```

2)run it in docker playground

```
Digest: sha256:b558be874169471bd4e65bd6eac8c303b271a7ee8553ba47481b73b2bf597aae
Status: Downloaded newer image for docker/getting-started:latest
docker.io/docker/getting-started:latest
→ assignment 4 git:(main) docker run -d -p 80:80 docker/getting-started
ee6d34bd49e20106c8d3a3cc85bab0bde9c96a667bb3112bc896358efd6d2f68
→ assignment 4 git:(main) D|
```

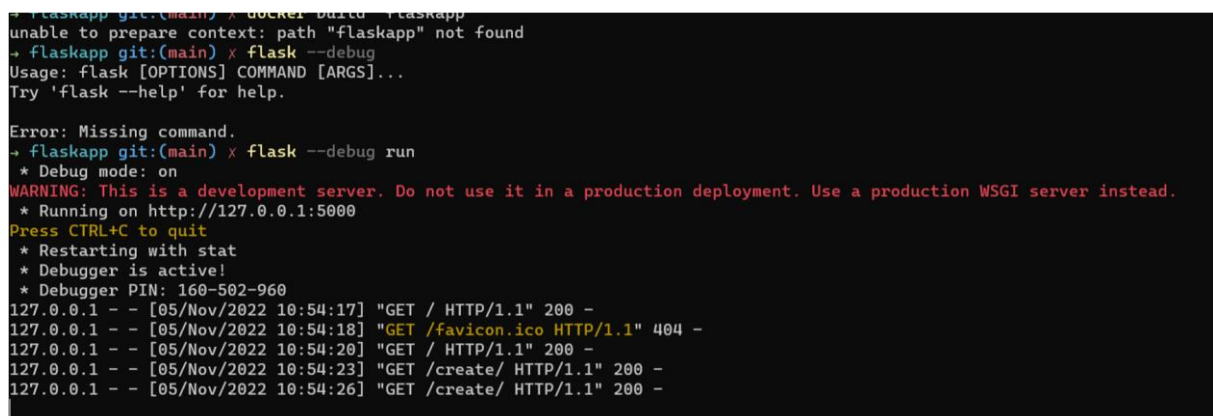

Question-2: Create a docker file for the job portal application and deploy it in docker application. 1)Creating a docker file for the job portal application

The screenshot shows the Visual Studio Code interface with the Explorer view on the left and the Dockerfile editor on the right. The Explorer view shows a project named 'ASSIGNMENT 4' with a subdirectory 'flaskapp' containing files like '__pycache__', 'templates', 'app.py', 'app.pyc', 'Dockerfile', and 'requirements.txt'. The Dockerfile editor shows the following content:

```
flaskapp > Dockerfile
1 FROM python:3.10.6
2 WORKDIR /app
3 COPY requirements.txt ./
4 RUN pip install -r requirements.txt
5 COPY . .
6 EXPOSE 5000
7 CMD ["python", "./app.py"]
8
```

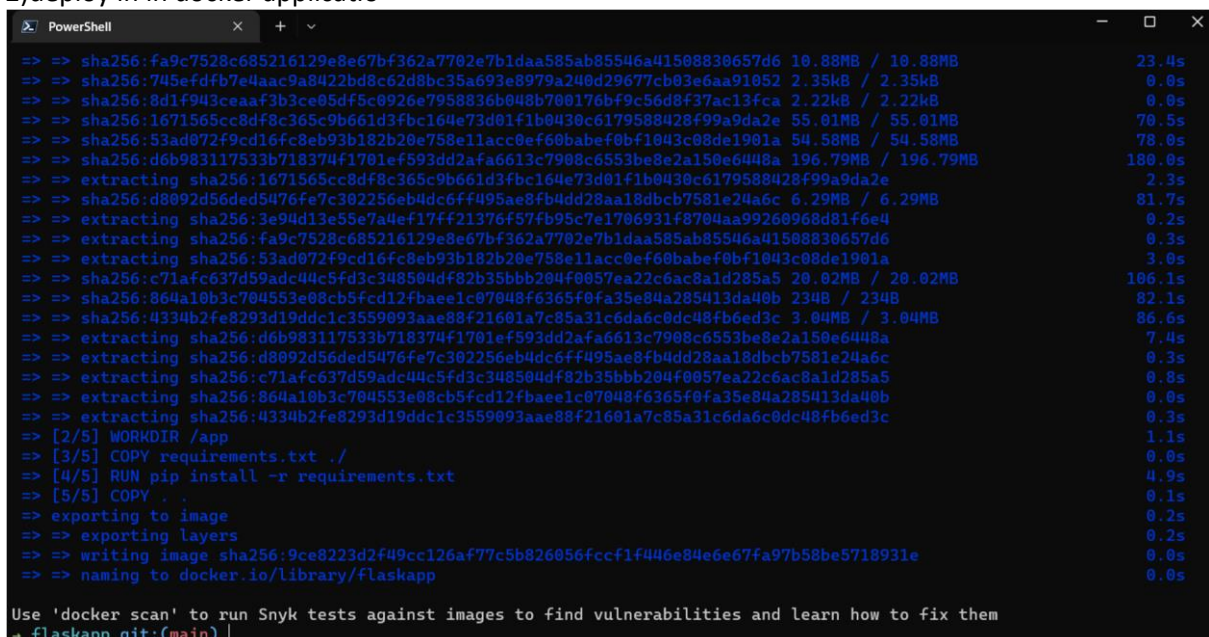

The screenshot shows the terminal output of the Flask application. It starts with the command 'flaskapp git:(main) x flask --debug run'. The output shows the application running on http://127.0.0.1:5000. The terminal output is as follows:

```
flaskapp git:(main) x flask --debug run
unable to prepare context: path "flaskapp" not found
flaskapp git:(main) x flask --debug run
Usage: flask [OPTIONS] COMMAND [ARGS]...
Try 'flask --help' for help.

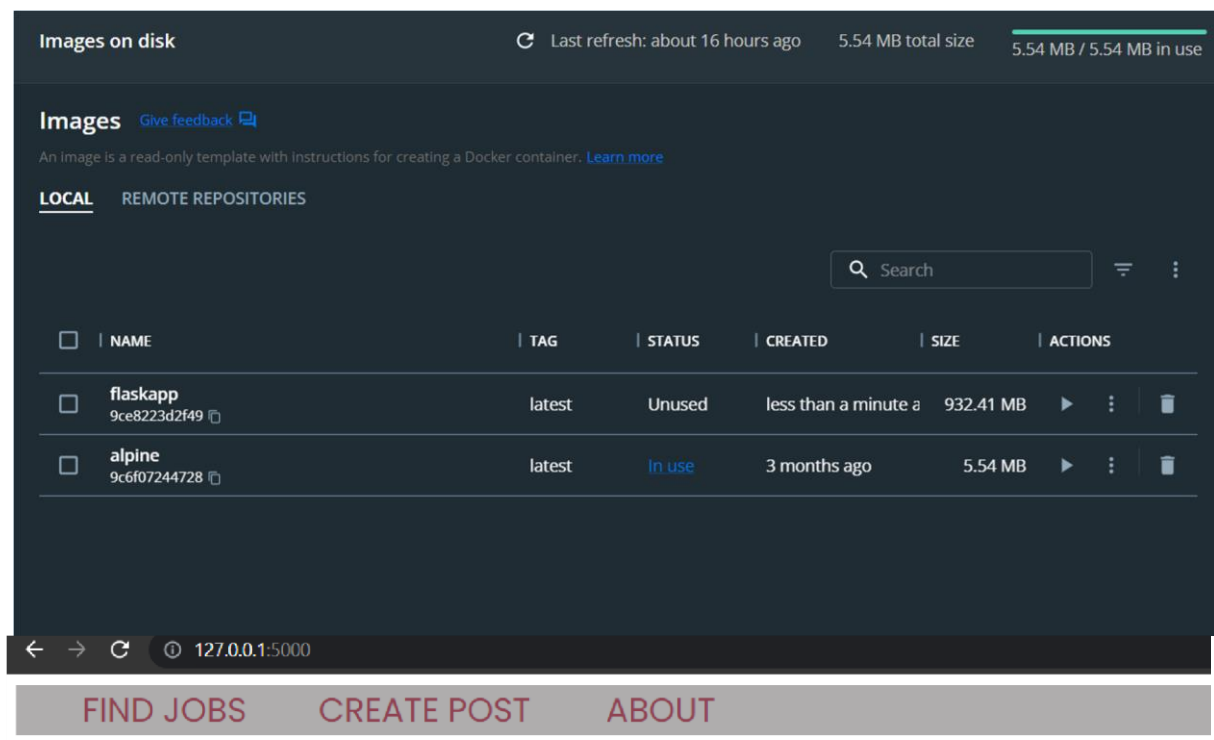

Error: Missing command.
flaskapp git:(main) x flask --debug run
* Debug mode: on
WARNING: This is a development server. Do not use it in a production deployment. Use a production WSGI server instead.
* Running on http://127.0.0.1:5000
Press CTRL+C to quit
* Restarting with stat
* Debugger is active!
* Debugger PIN: 160-502-960
127.0.0.1 - - [05/Nov/2022 10:54:17] "GET / HTTP/1.1" 200 -
127.0.0.1 - - [05/Nov/2022 10:54:18] "GET /favicon.ico HTTP/1.1" 404 -
127.0.0.1 - - [05/Nov/2022 10:54:20] "GET / HTTP/1.1" 200 -
127.0.0.1 - - [05/Nov/2022 10:54:23] "GET /create/ HTTP/1.1" 200 -
127.0.0.1 - - [05/Nov/2022 10:54:26] "GET /create/ HTTP/1.1" 200 -
```

2)deploy in docker applicatio

The screenshot shows the PowerShell terminal output of the Docker build process. It starts with the command 'docker build -t flaskapp .'. The output shows the build process, including the extraction of the base image, the copying of requirements.txt, the installation of dependencies, and the final image creation. The terminal output is as follows:

```
PowerShell
> docker build -t flaskapp .
[+] Building 0s (to build)
=> [1/5] WORKDIR /app
=> [2/5] COPY requirements.txt ./
=> [3/5] COPY . .
=> [4/5] RUN pip install -r requirements.txt
=> [5/5] EXPOSE 5000
=> exporting to image
=> exporting layers
=> writing image sha256:9ce8223d2f49cc126af77c5b826056fccf1f446e84e6e67fa97b58be5718931e
=> naming to docker.io/library/flaskapp
Use 'docker scan' to run Snyk tests against images to find vulnerabilities and learn how to fix them
flaskapp git:(main) |
```

Question-3: Create a IBM container registry and deploy hello world app or jobportalapp 1)

create a IBM container registry

```

→ ~ git:(main) x ibmcloud
NAME:
  C:\Program Files\IBM\Cloud\bin\ibmcloud.exe - A command line tool to interact with IBM Cloud
  Find more information at: https://ibm.biz/cli-docs

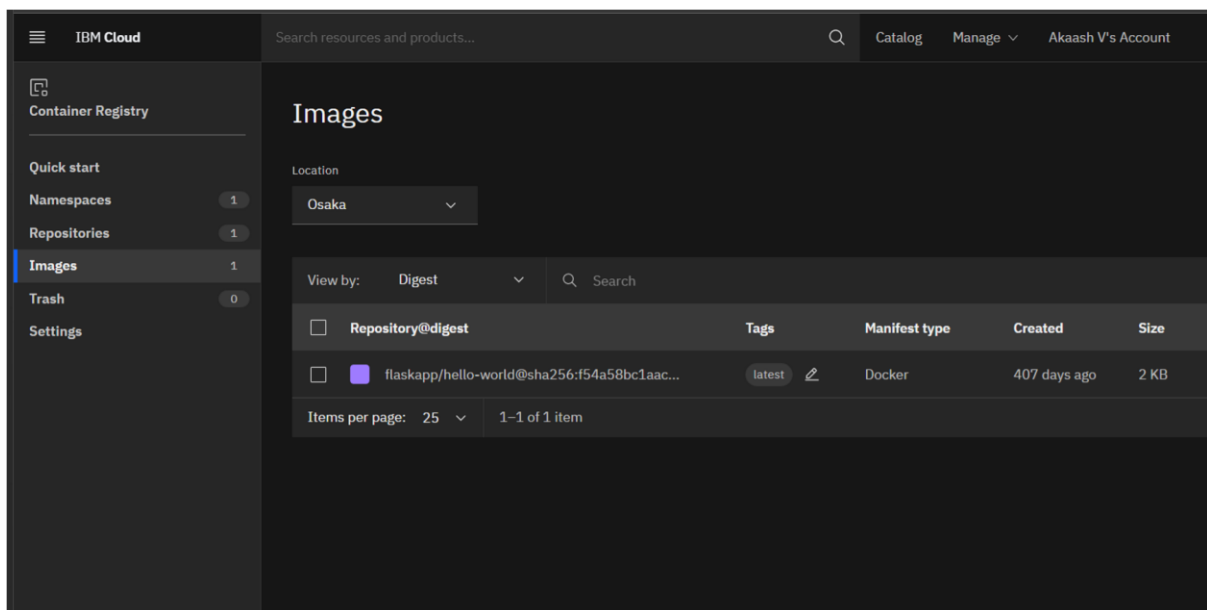

USAGE:
  [environment variables] C:\Program Files\IBM\Cloud\bin\ibmcloud.exe [global options] command [arguments.
  ptions]

VERSION:
  2.12.1+b8488a1-2022-10-31T15:08:10+00:00

COMMANDS:
  account      Manage accounts, users, orgs and spaces
  api          Set or view target API endpoint
  billing      Retrieve usage and billing information
  catalog      Manage catalog
  cf           Run Cloud Foundry CLI with IBM Cloud CLI context
  config       Write default values to the config
  cr           Manage IBM Cloud Container Registry content and configuration.
  dev          Create, develop, deploy, and monitor applications
  enterprise   Manage enterprise, account groups and accounts.
  iam         Manage identities and access to resources
  login        Log user in
  logout       Log user out
  plugin       Manage plug-ins and plug-in repositories
  regions      List all the regions

```

2)deploy hello world or jobportal

Question-4: Create a Kubernetes cluster in IBM cloud and deploy helloworld image or jobportal image and also expose the same app to run in note port

1)Creating a Kubernetes cluster in IBM cloud
